Application:

7-dehydrocholesterol is mainly used as an important intermediate for the synthesis of vitamin D3 and as an additive in skincare, sun protection, and cosmetics. 7-dehydrocholesterol (7-DHC) is a 5,7-conjugated diene sterol and a precursor for cholesterol biosynthesis. When exposed to ultraviolet B (UVB) radiation, it contributes to the production of vitamin D3. 7-dehydrocholesterol is an internal standard for the determination of sterols and also used as other laboratory reagents.
