**Product name: Ammonium adipate**

**CAS: 19090-60-9**

**Molecular wight:163.17**

Item	Standard
Appearance	Solid crystallization
Density	1.26 at 20°C
vapor pressure	0-0Pa at 20-25°C
LogP	0.3 at 25°C and pH2.7-8.8

---

### **Application:**

Ammonium adipate is mainly used as a low voltage aluminum foil and solid state capacitor production process formation and low voltage electrolyte solute, aqueous solution can also be used as a high voltage aluminum foil galvanizer, can be used for capacitor production. Ammonium adipate is used as a working liquid in the production of electronic aluminum foil, which has high requirements for chloride ion content and is required to be controlled within 2mg/kg.

### **Package:**

25kg/bag or according to customer requirements.
