**Product name: Lead(II) carbonate basic**

**CAS: 1319-46-6**

**Molecular wight:775.63**

Item	Standard
Assay	99%min
Melting point	400°C(dec.)(lit.)
Density	6,14g/cm <sup>3</sup>
Specific gravity	6.14
Water solubility	Insoluble

### **Application:**

The application of Lead(II) carbonate basic is limited due to the possibility of lead poisoning during production and application, the coatings made of lead white are easy to thicken and the whiteness of contact with hydrogen sulfide is decreased. However, the paint film produced with lead white is fast and has excellent weather resistance and rust prevention. In the paint industry, it is still used as a white pigment for the production of raw paint, anti-rust paint and outdoor paint. It is also the raw material for making ceramic glaze, painting paint and cosmetic products. Used as a vinyl chloride plastic stabilizer. Used for making pearlescent plastics, pearlescent paints, etc.

### **Package:**

25kg/drum or according to customer requirements.
